

Task Description

Apart from the earlier work, we will make this site interactive. To do so, let's make the sections below workable.

Location

The image shows a screenshot of the Airbnb website. At the top, there is a navigation bar with links: "Get the app", "United States", "Trip Boards", "List your property", and "Help". A red arrow points to the "United States" link with the text "Click Here". Below the navigation bar, there is a section for the "Juneau Vacation Home" with a large image of a lake and mountains, and several smaller images of the property's interior and exterior. Below the images, there are tabs for "Overview", "Amenities", and "Policies". A modal window titled "Display settings" is open in the center of the screen. It contains a warning icon and text: "Changing your region could change your rewards program. To stay with your current rewards program keep your region the same. One Key is currently only available in select regions." Below this text, there are two dropdown menus: "Region" (currently set to "Portugal") and "Currency" (currently set to "EUR"). A red arrow points to the "Currency" dropdown with the text "Currency will change Based on Region Selection". At the bottom of the modal, there is a blue "Save" button. The background of the website is dimmed.

Acceptance criteria

1. Below technology/tools must be used
 - a. [HTML5](#)
 - b. [CSS](#)
 - c. [Javascript](#)
2. UI Design should be mobile friendly (Responsive)
3. Must send a Github repo link which is public and contains a README.md
4. No cheating, will be disqualified
5. No use of 3rd party Javascript framework. E.g. JQuery, Vue, React. Only [vanilla JS](#) is acceptable this time. For calendar or slider use libraries supported by vanilla js.

Notes:

The more you make it interactive and easy to use, will get more marks. You should focus on optimization while using DOM manipulation.

Deadline
